Design Perin & Topan

**Ola** collection combines elegance and simplicity in a single element, by perfectly fitting in with **any environment**: a waiting or a meeting room, offices and public places in general.

With or without armrests, made of polypropylene or in the precious leather version, Ola always keeps the **soft and curvy shapes** of the seating, a natural continuation of its shell made of Ø16x2 chromed **steel tube** conferring elasticity and an exceptional resistance to stress.

In the variant made of **polypropylene** (mass-colored with the injection technique and with anti-slipfinishing) four colors are available in the catalogue (ivory, grey, cherry red and orange). Upon request, the colors may be customized.

The collection is **completed by the variants** with writing tablet, with sled base, swivel base and with the bench model (with or without magazines rack). The models with sled base or with four legs **may be easily stacked and transported** by means of the special and handy trolley (up to 10 chairs).

## COLORS

Body and armrests (plastics)

**PLASTIC**

**FABRICS**

**LEATHER**

Chrome - plated structure

## MATERIALS

Body and armrests  
*Polypropylene*

Structure

Design Perin & Topan

"Established in 1974, **Bericoplast** S.p.a. is today considered one of the first manufacturers of monocoque seats made by means of the injection molding of plastic materials. The distinctive features of the company are versatility and design dynamism that allow manufacturing products meeting the most different customer's needs. Thanks to a series of focused alliances and agreements, Bericoplast is present on the **worldwide markets**.

All Bericoplast products are completely manufactured in **Italy** and they are 95% **recyclable**.
