ABOUT MOVIMOTOR

MOVIMOTOR S.r.l. was established in 1987 since then it has specialised in the design, development, production and sales of d.c. motors and gear motors.

From the very beginning our company has based its growth on production and service flexibility, by planning and producing motors and gear motors according to customer specifications.

Between the end of 2004 and the beginning of 2005 MOVIMOTOR moved into new premises of 3500 sqm. In the years 2013- 2014 the company began the expansion of the building which now covers a total area of 8000 sqm.

MISSION

Production flexibility and technological innovation are very important to MOVIMOTOR, which has always invested in high-tech machinery and moulds. This enables the production of complete projects suitable for any customized solution. MOVIMOTOR's main aim is customer satisfaction, both for mass production of large quantities, and for small series of particular customized items.

TOTAL QUALITY

MOVIMOTOR has always taken great attention to the market requirements and changes; for this reason it has implemented the required procedures to achieve:

the UNI EN ISO 9002 Quality Certification in 1997

the UNI EN ISO 9001:2000 Quality Certification in 2003

the UNI EN ISO 9001:2008 Quality Certification in 2009

the UNI EN ISO 9001:2015 Quality Certification in 2017

PRODUCTS

The quality and reliability of all our products are ensured by the strict control whether on coming materials at our premises either during the production process and on every single finished product which is tested before the delivery. Most of the production is performed inside the company (outer suppliers only follow some minor manufacturing). This ensures the regular checking of all the operations and also high standards of quality thus avoiding any possible problem during the manufacturing process.

APPLICATIONS

Nowadays MOVIMOTOR supplies very important customers in industrial, civil and free-time field. Our products are mainly used in automatic entrance systems (for doors, gates, road barriers) in boats (pumps, blowers, electric reel systems) , in the medical-health field (dry aerosol features, medical devices), amusement parks (carousels for children) , in agriculture (pumps and farm tools), in fitness centres, in industrial cleaning machines and on every single device that works with batteries.

PRODUCTION

Most of our production is performed in-house (outer suppliers only follow some minor manufacturing). This ensures the regular checking of all the operations, flexibility and dynamism in the deliveries and in the changes of the product according to customers demand.

The production run is organized into departments equipped with the latest generation machinery:

- Prototypes department
- Shafts department
- Mechanics department
- Rotors department
- Stators department
- Brush holders department
- Assembling and testing department

PACKING, LABELING AND TRACEABILITY

On every labeled product are indicated, in addition to the electrical datas, the production batch reference and the serial number, for a complete and efficient traceability of the product in case of complaints. On request it's also possible to apply a customized label with the customer's logo and name.

The operators declare every worked phase with a recording bar-code system which allows to trace the whole production cycle.

PRODUCTS

Movimotor offers a large range of products, customizable on request, which includes D.C. motors, gearmotors and differential gears for drive and traction systems.

Movimotor pays high attention and care to the components used to ensure the highest quality of the product and the full customer satisfaction.
